creceptor, which is a membrane protein, coupled to quantine nucleotide countries (G-proteins). The genc has been cloned by binding protein (G-proteins). The genc has been cloned by could protein reaction amplification of human genomic DNA, using CC polymerase chain reaction amplification of human genomic DNA, using CC primers derived from the Xenopus laevis melatonin receptor sequence cc primers derived from the Xenopus laevis melatonin receptor sequence cc isolation of the full-length clone. Primers 10955-56 amplify a cc isolation of the gene, and have been used with probe 70992 to cc interact with melatonin, or specific antibodies, may be used as complete the tissue distribution of this gene for comparison which cc interact with melatonin, or specific antibodies, may be used as complete disorders, to control ovulation, or in alteration of cycle disorders, to control ovulation, or in alteration of the sequence of the seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The interaction of the interaction of the interaction of the interaction of the receptor and as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             melatonin receptor-agonist; melatonin receptor-antagonist; circadian rhythm disorder; jet-lag; day-night cycle disorder; ovulation; reproductive cycle; animal breeding; puberty; antibody; transgenic animal; drug screening; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   High-affinity melatonin-la receptor gene

                                                                                                                                              melatonin receptor agonist can be used as an agent for preventing or treating jet lag sierpiessness, seasonal melancholia. Altheimer's disease, dementia caused by censor thrombosis, various diseases accompanying againg, high blood pressure, cancer, and glauroma. The melatonin receptor can also be used as an ovulation regulator. The melatonin receptor antavenist can be used as an agent tor preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the coding sequence for the human melatonin receptor protein. This sequence is used in an expression vector designated parks observed the expression vector is used to produce the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant human malatonin receptor protein and (ant)agonists used for treating jet lag, Alzheimer's disease, melanchoila, neurosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     chinese hamster avary (CHO) sells of the invention. The CHO oclis express the human melatonin receptor protein, and can be used to identify compounds (such as agonists and antagonists) having affinity to the receptor. The choosing also be used to produce the receptor. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 1997-252999/23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    library, to obtain the complete sequence as a hybrid fusion with a 5' genomic sequence and a 3' cDNA sequence. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor agonists or receptor-anagonists. Agopists may be used in therapy of circadian rhythm disorders such as jet-lag or day night cycle disorders, to control ovulation, or in alteration of cycle disorders, to control the initiation or timing of puberty in may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tuberalis mRNA, using primers derived from the Xenopus laevis melatonin receptor sequence (T09947), and use of the product as a probe on a sheep pars tuberalis cDNA library and a sheep genomic therein the contract of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  which is a membrane protein, coupled to quanine nucleotide binding proteins (G-proteins).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \mathbb{R}^{3}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC (Mella) receptor (see W2396). A 466 bp fragment of the dene was continued from persons tax by PCF, and was used to grobe a PALR of addit mouse liver special variety of isolate the Mella consistency by grobe a Palated in PCF, and was used to grobe a PALR of the Mella consistency by grobe and the Mella consistency of the promoter (II) inked to a reporter grope. Cells containing (I) are used to screen compounds (A) for grope. Cells containing (I) are used to screen compounds (A) that are contrated to a reporter in the promoter in the blind or contration of course cycle in seasonally breeding animals, while those that CC are inhibitors are used to control initiation and timing of puberry con humans. Screening for (A) can now be done in cultures of contral which do not naturally express the receptor (which constraints) in the control control in the control of the control 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                         DNA encoding high affinity melatonin receptor one – used to identify receptor agonists or antagonists e.g. for regulating circadian rhythm disorders or reproductive cycles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-DEC-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (MASS-) MASSACHUSETTS GEN HOSPITAL.
                                                                                      proteins (Oproteins) The dene has been closed by the course R2-2 transcription-polymerase chain reaction amplification of mouse R2-2 man. The corresponding genomic DNA consists of 2 exciss divided by mRNA. The corresponding genomic DNA consists of 2 exciss 444 bp a large (over 8 kb) intron. The 3 unitianslated region is 444 bp a large (over 8 kb) intron. The 3 unitianslated region A major long, and includes the polyadenylation signal AUUAAA. A major long, and includes the polyadenylation south 100 bp upstream of the transcription start site is located about 100 bp upstream of the initiation codon. Receptor fragments which interact with initiation codon. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists melatonin, or specific antibodies, may be used in therapy of or receptor antagonists. Agonists may be used in the provided the polyadenylation as set-lag or day-night cycle.
                                                                                                                                                                                                                                                                                                                                       Claim 9; Fig 3; 115pp; English.
                                                                                                                                                                                                                                                which is a membrane protein, coupled to quanine nucleotide binding proteins (G-proteins). The gene has been cloned by reverse
                                                                                                                                                                                                                                                                                         The sequence encodes a mouse high-affinity melatonin-la receptor
circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The

The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. This sequence is a short form of the novel receptor MEL-1Ab also known as Mol 1-c(beta). As compared to the short form (179066), the difference occurs in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mPNA. The MEL-1Ab sequences also differ from known MEL-1A receptor sequences by a mino acids. The nucleotide sequence was isolated from cDNA derived from knoppus skin RNA and amplified using the primers 179067-76. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Allele: Xenopus laevis: melatonin: receptor: untranslated region: PCR: mPNA: halt-life: skin: amplification: primer: polymerase chain reaction: transmembrane domain: cellular signalling; inhibition: adenylyl cyclase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           intranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The MEL-lab sequences also differ from known MEL-la receptor sequences by 6 amino acids. The nucleotide sequence was isolated from coNA derived from Xenopus skin RNA nucleotide sequence isolated from CDNA derived from Xenopus skin RNA and amplified using the primers T79067-76. The nucleotide sequence and amplified using the primers T79067-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling MEL-lab has been shown to modulate intracellular CCMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodiesterase, but unlike MEL-laa (T79063) cannot inhibit adenylyl phosphodiesterase, but unlike MEL-laa (T79063) cannot inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (ant)agonists useful for e.g. treating cardiovascular disease and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Jockers R. Marullo S.

The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. This sequence is a long form of the novel receptor MEL-1Ab also known as Mel 1-c(beta). As compared to the short form (179066), the difference occurs in the 3' As compared to the short form (179066) the difference occurs in the 3'

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              melatorin receptor MEL-IA. The sequences encode proteins which are 65 melatorin receptor MEL-IA. The sequences encode proteins which are 65 mainto acids shorter than those described in the prior art. Also the last 2 C-terminal amino acids encoded by these sequences are different from 20 the previously known proteins. This sequences are different from 20 the previously known proteins. This sequences are different from 20 torm (T79053), the difference occurs in the 3 untranslated region (both 21 sequences encode the same protein), which is thought to affect the half-life of the mRNA. The nucleotide sequence was isolated from cDNA derived from Kenopus skin RNA and amplified using the primers T79057-76. The nucleotide sequence was isolated from cDNA derived from kenopus skin RNA and amplified using the primers T79057-76. The nucleotide sequence has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular composition of the primers of the nucleotide sequence was isolated from cDNA and application inhibitor of the primers of the nucleotide sequence was included by an inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

sequences enough the same protein), which is thought to affect the half-life of the mRNA. The nucleotide sequence was isolated from CDNA derived from Xebergus skin sNA and amplified using the primary 17067.76 The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalizing. MEI-lAA has been shown to inhibit adentity operate, but both proteins can modulate intracellular cOMMP, rep inhibiting its accumulation induced by an inhibitor of the previously known proteins. This sequence is a long form of the novel receptor MEL-1Am also known as Mel 1-c(alpha). As compared to the short form (179004), the difference occurs in the 3 unitaristated region (both Sequences 17-weak-by represent movel alimin ander of the Abbuquas laevis melatonin receptor MELIA. The sequences enough proteins which are 65 amino acids shorter than those described in the prior art. Also the late of terminal amino acids encoded by these sequences are different from phosphodiesterase. Also the last

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         W09535320-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which is a membrane protein, coupled to guanine nucleotide binding proteins (G-proteins), and has been cloned by PCR amplification of human genomic DNA, using primers based on the 3rd and 6th transmembrane domains of the xenopus sequence (T09947), then transmembrane domains of the interest of the xenopus sequence (T09947), then transmembrane domains of the interest of the interes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (MASS-) MASSACHUSETTS GEN HOSPITAL.
                                                                                                                                                                                                                                                                                                       receptor-agonists or receptor-antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans be receptor gene may also be expressed in a transgenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      an intron of about 9 0 kb in the 1st cytoplasmic loop region. Intron PCR with primers T09953-54 and 43 human-rodent somatic Intron PCR with primers T09953-54 and 43 human-rodent somatic cell hybrids has been used to localize the human MURTHB gene to chromosome 11q21-22. Primers T09955-56 and probe T09961 have been used to analyse tissue distribution. Receptor fragments which used to analyse tissue distribution antibodies, may be used as interact with melatonin, or specific antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        rhythm disorders or reproductive cycles

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       receptor-agonists or receptor-antagonists. Agonists may be used in the tag of circudian rhythm disorders such as jet lag or day night cycle disorders, to control ovolation, or in alternation of reproductive cycles in seasonally broading animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human melatonin receptor sequences. Receptor fragments which interact with melatonin, or specific antibodies, may be used as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequences given in G7223-26 are primers which were used to amplify the 3' end of the rat alpha-IB adrenergic receptor (see also G7227). The amplified human sequence was ligated to the 3' end of the G7 erat sequence to give the sequence quiven in Q87879. The complete coding region for the human/rat alpha-IB adrenergic receptor was subcloned into the nukaryotic expression vector pcnNArienor. The receptor was subcloned into the nukaryotic expression vector pcnNArienor. The resulting plasmid was cransferted into cost 7 cells transferted with the vactor containing the alpha-IB receptor gene specifically bound the alpha-I antagonist [1251]-HEAT. Transformed membranes such as these may be used to discover ligands that bind to the receptor and alter its function. Truncation at the 3' end of the sequence does not affect the functioning of the receptor, as long as the ligand binding domain and signal transduction segments of the C7 receptor are used to identify compounds which bind to this receptor with at least a 12 fold greater affinity than to other adreneratic receptors. The major all prostatic hypertrophy, particularly when used in conjunction of the rest or prevent male pattern balances, seborrhoea, female hirsutism, or or prevent male pattern balances, seborrhoea, female hirsutism, to repressive the pattern balance. For treating baldness they may be formulated with a potassium channel opener such as minoxidil. The coloned receptors can be used to server seems a minoxidil. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Searched:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Result
No.
pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution
                                                                                                                                                                                                                              5823 57

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (908)594-4720

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14 - APR - 1995                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08/229,276
